Education

University of California, Berkeley Berkeley, CA

B.A. Computer Science and Applied Mathematics; GPA 3.67 *Aug. 2022 – May. 2026*

- **Coursework:** Data Structures (CS 61B), Discrete Mathematics (CS 70), Introduction to Machine Learning (CS 189), Linear Algebra (Math 110), Numerical Analysis (Math 128A), Optimization (EECS 127), Introduction to Artificial Intelligence (CS 188), Real Analysis (Math 104), Complex Analysis (Math 185), Abstract Algebra (Math 113), Principles of Data Science (Data 100)

Experience

PlanMember Financial Corp Carpinteria, CA

Software Developer *May 2026 – Present*

- Co-leading development of a next-generation code-generation agent built on LangChain's deepagents framework with Qdrant-based retrieval, after reliability gaps surfaced in AICA on large codebases; own the retrieval and language-context pipeline, including LSP integration across Python, JavaScript, ColdFusion, and MSSQL/T-SQL for accurate code context.
- Designed and built an end-to-end pipeline integrating Figma with AICA, our internal AI coding assistant, generating code directly from Figma files to eliminate manual translation of design specs; engineered a LangGraph pipeline that gates Figma MCP server calls behind an LLM-based context-sufficiency check, rerouting under-specified queries back to developers to prevent failed generations — cutting manual design-to-code translation time by an estimated 40%.
- Built a chunk-and-reassemble feedback loop after single-pass generation failed on large files: reassembles chunks into a candidate, rechunks flagged sections, and validates for cross-file consistency.

Hawl Technologies Remote

Front-End Developer Intern *Apr. 2026 – May 2026*

- Identified a gap in Memory Galaxy's analytics layer where cluster-level insights were absent; independently researched and engineered a React component that aggregated data across memory constellations to surface group-level patterns, themes, and relationships, enabling users to understand entire clusters of related memories holistically rather than analyzing individual entries in isolation; validated changes through iterative feedback sessions with teammates to improve usability.
- Developed and maintained a shared component library with standardized design tokens to enforce UI consistency across teams; accelerated feature development by enabling rapid assembly of pre-validated, reusable interface modules.

Technical Skills

Programming & Frameworks: Python (Pandas, NumPy, Scikit-learn, PyTorch), Java, C++, R, JavaScript, Next.js, Node.js
AI/ML & LLM Tooling: LangChain, LangGraph, Retrieval-Augmented Generation (RAG), Vector Databases (Qdrant), Prompt Engineering, LLM Evaluation
Data Engineering & Infrastructure: SQL (Snowflake/PostgreSQL), Git, AWS (Lambda/S3/Bedrock), Vercel, ETL/ELT Pipelines
Mathematical Foundations: Numerical Analysis, Statistical Inference, Linear Algebra, Optimization, Probability
